

Jamieson Fence Supply is committed to providing quality gate products and services.

Because safety is an important part of Jamieson's design and manufacturing criteria, we follow the standards developed by Underwriter's Laboratory (UL 325) and ASTM F2200-02 as developed by ASTM International.

While these safety standards are specific to automated gates, Jamieson also chooses to apply them to manual gates to restrict hazards such as protrusions, pinch points and entrapment zones and in case a gate is automated at a later date.

For more information about Jamieson gates, please contact your nearest Jamieson Fence Supply Branch Manager or email [gates@jamiesonfence.com](mailto:gates@jamiesonfence.com).
